<https://github.com/Shanmughanathan>

OBJECTIVE

- Aspiring software developer seeking opportunities to tackle challenging projects that drive innovation, while fostering personal and professional growth through continuous learning and meaningful contributions

PROFESSIONAL SUMMARY

- **5.5** years of experience in software development with a strong focus on backend technologies and frameworks.
- Proficient in **Java**, **Spring**, and **Spring Boot**, with expertise in building robust and scalable applications.
- Certified **AWS Cloud Practitioner**, demonstrating foundational knowledge of cloud computing services.
- Experienced in designing and implementing **RESTful APIs** and integrating with **Microservices** and interact with database like **MySQL**, **ORACLE** and other relational databases
- Skilled in debugging, optimizing, and refactoring code to meet high performance and efficiency standards.
- Skilled in writing comprehensive **JUnit** test cases for both new and existing code to ensure quality and reliability.
- Hands-on experience with **RFC releases** and **load testing** to ensure seamless deployment and optimal performance..
- Proficient in using version control tools like **Git** for effective collaboration and code management, with hands-on experience deploying changes using **OpenShift**.
- Hands-on experience in using **Sumo Logic** logs to analyze and **troubleshoot production issues**, effectively reproducing and resolving them in the development environment.
- Strong communicator and collaborator across teams, ensuring effective resolution of issues, timely implementation of new features, and continuous follow-up until deployment to production. Monitors production changes post-deployment for ongoing success.

TECHNICAL SKILLS

- **Programming Languages** : Core Java
- **Framework** : Spring, Spring Boot
- **Build Tool** : Maven
- **Databases** : MySQL, SQL Server, Hibernate
- **Deployment Tool** : Git, RedHat OpenShift

PROFESSIONAL WORKING EXPERIENCE

- Currently working as a Associate in Cognizant Technology solutions - Kochi -Since September 2025
- Worked as System Engineer in Tata Consultancy Services at Chennai from 6 March 2023 to 29 August 2025. Worked as a Software Development Engineer at Claritrics India Private Limited, Chennai, from February 2021 to February 2023.
- Worked as a Intern at Claritrics India Private Limited, Chennai, from November 2020 to February 2021

ACADEMIC HISTORY

- B.TECH - IT from Kalasalingam Academy of Research and Education, Virudhunagar - 2016 - 2020

PROJECT EXPERIENCE

DOMAIN : AIRLINE

PROJECT NAME : DELTA AIRLINES

TECHNICAL SKILLS USED : JAVA, Spring Boot, REST API, Hibernate, Microservices.

PROJECT DESCRIPTION

- The project focused on the Flight-Order system, where requests containing passenger details and payment information were processed by the engine. The system generated a Passenger Name Record (PNR) upon successful processing, which documented the ticket. Once the PNR was generated, it allowed for further operations such as updating, canceling, and retrieving PNRs. This solution ensured efficient management of flight bookings, enhancing the user experience by providing seamless ticket creation and management capabilities.

DOMAIN : HEALTHCARE

PROJECT NAME : CHANGE HEALTHCARE

TECHNICAL SKILLS USED : JAVA, Spring Boot, Microservices, REST API, MySQL

PROJECT DESCRIPTION

- The project focused on automating the medical coding process for various medical records, primarily for Radiology and Pathology. The system was designed to parse incoming medical charts and tag the data based on specific requirements. Depending on the modality of the medical record, the engine would process the data and interface with specialized coding engines. The output of this process was the generation of CPT, ICD, and PQRS codes, which are essential for medical billing. By automating the generation of these codes, the system streamlined the coding workflow, reducing manual intervention, ensuring accuracy, and improving the efficiency of medical billing for Pathology medical charts.

ROLES AND RESPONSIBILITIES

- Main responsibility is migrating all SOA (SOAP) calls to AWS (REST) calls, ensuring seamless integration and performance on the cloud platform.
- Understand project requirements and gather inputs from the respective teams to begin work on defects or new implementations
- Analyze requirements to ensure a clear understanding before starting the work
- Write code that complies with established coding standards and principles.
- Complete defects or implementations within the estimated time frame set at the start of the sprint.
- Write appropriate test cases to ensure full coverage of the code and account for all possible scenarios.
- Deploy changes to the environment and monitor the deployment process, ensuring all changes are successfully implemented.
- Participate in production releases, ensuring that all necessary steps are followed and the changes are deployed smoothly.
- Involved in RFC and load testing to ensure optimal performance and reliability of the system
- Act as the PI SPOC (Process Improvement Single Point of Contact) by collaborating with cross-functional teams to log Process Improvement (PI) items.
- Follow up on PI items to reduce costs and improve overall process efficiency through continuous improvement initiatives.

DECLARATION

I hereby declare that the information furnished above is true to my knowledge.
